

Optical alignment device BFI 235 for standard-housing

For alignment of the visual axis of the Flame Scanner / Compact Flame Controller.

The circle insight the visor represents the detecting area of the sensor.

With a swivel mount the visual axis can be aligned as shown below. The images in the upper line show a correct alignment.

The images in the lower line show a misalignment of the visual axis of the flame scanner or a negative influence by burner internals.

Remove the Flame Scanner / Compact Flame Controller, replace it with the optical alignment device and fix it with the screws.
